Idea Purpose

Empowering the **hearing-impaired** with **AR**

Real-time captions bridging communication gaps, fostering inclusivity, and enhancing interaction for a connected and inclusive society.

Problems

- **Deaf Population:** Over 65 million deaf individuals in India, indicating a significant market need.
- **Impact on Senior Citizen:** 48% of senior citizens struggle with hearing loss, affecting communication abilities.
- **Absence of Official Sign Language:** A lot of local variants exist for sign language.
- **Unemployment and Underemployment:** 70% of deaf individuals face limited job prospects.
- **Limited Education Access:** Only 5% of hearing-impaired children receive basic schooling. India has less than 400 deaf schools.

Problems

Insufficient Existing Solutions

- Affordability of Hearing Aid
- Limited Cochlear Implant Availability
- Less than 1 by 5 deaf individual use hearing aid

Solutions

01.

Developing AR headsets specifically designed for the hearing impaired

02.

Real-time conversion of audio to subtitles and sign language

03.

Facilitating effective communication

Product

Hardware

Our AR headset integrates with a smartphone, providing an immersive experience through a glass screen that reflects the phone's content.

Features

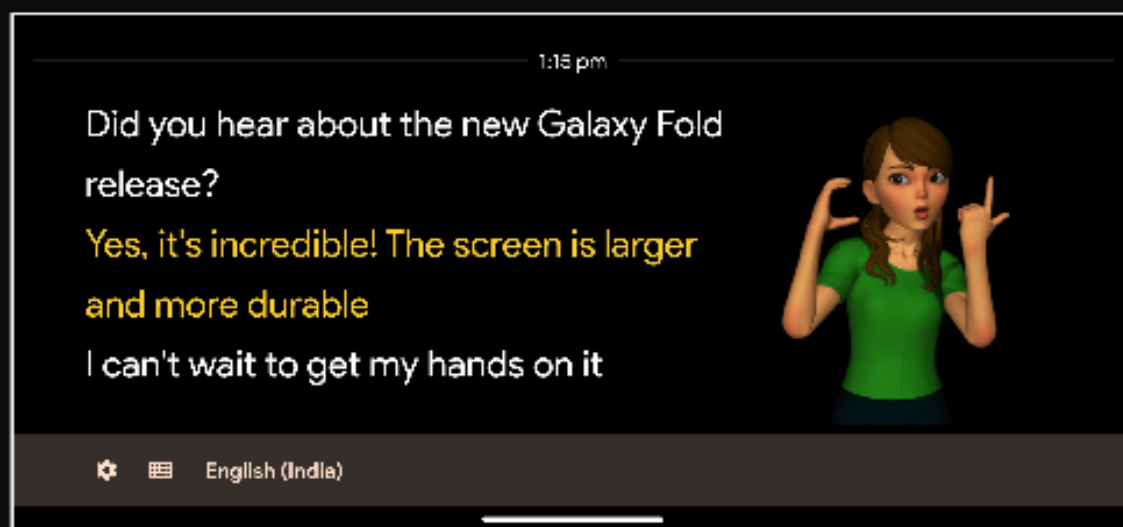

- Compatibility
- Clear Reflection
- User-Friendly Design
- Versatile Applications

Product Software

Our software complements the AR headset by converting voice into text and visuals, enhancing the user experience and accessibility

Market Size

5%
People

Globally 5% people affected by hearing issues -WHO

8.1%
CAGR

The hearing aid market is \$10.23 billion in 2022 growing at a CAGR of 8.1%

900M
People

According to WHO about 900M people worldwide are likely to suffer from hearing loss by the end of 2050.

Market Size

Total market we can capture in India is about **65 million people** which have some sort of hearing impairment

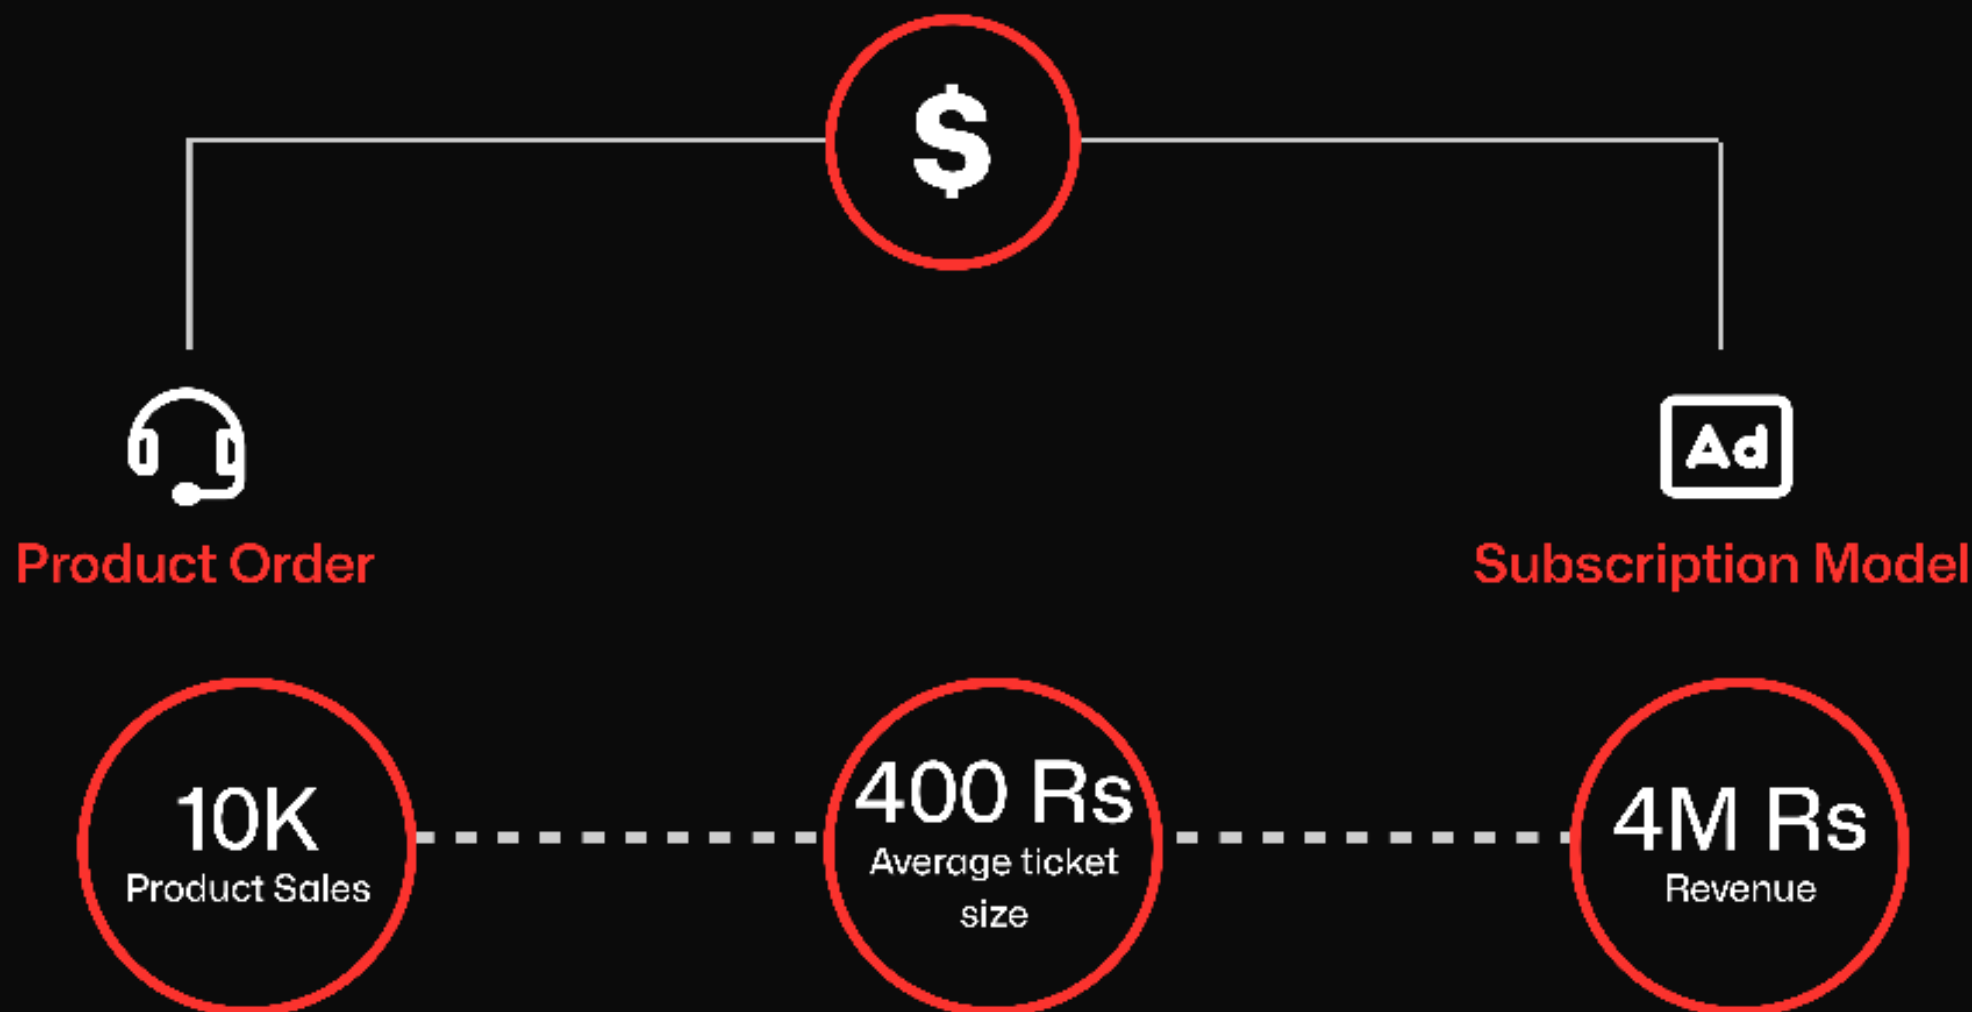

57% Of TAM which are literate enough to read captions or sign language which is around of **37 million people**.

4-5% of SAM which is around 15 lakh people

Business Model

*Expected sales in next 2 years

Business Model

Four main revenue sources

Financials

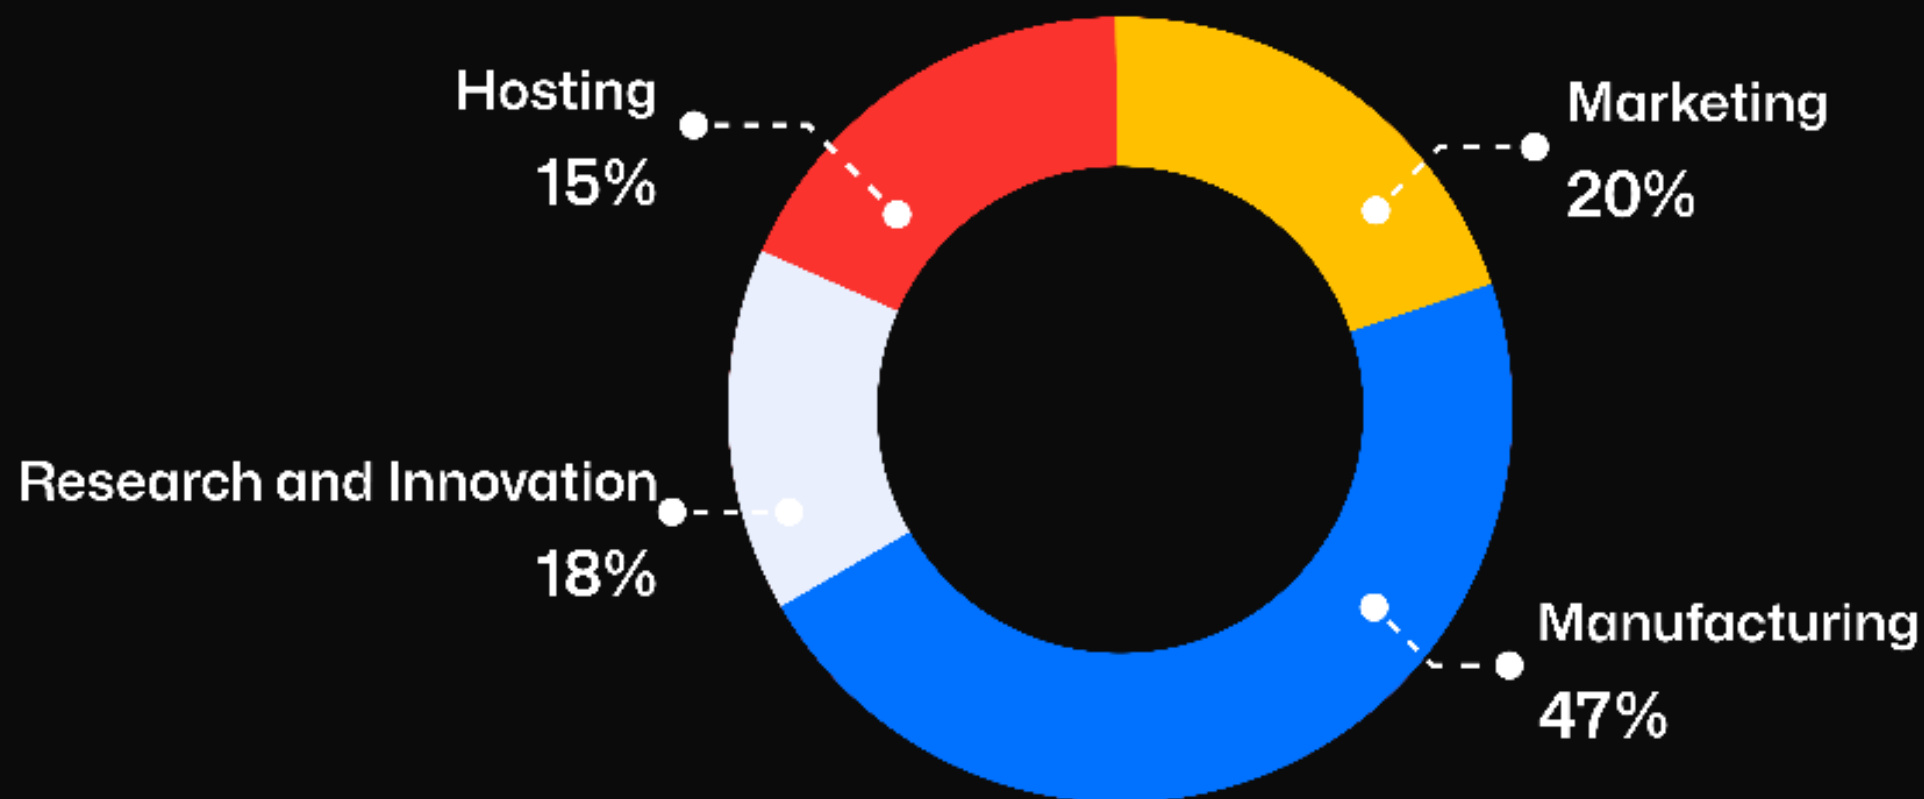

- **Initial Investment** : 5 lakhs for production injection molding enabling cost-effective mass production.
- **Cost** : Unit production cost under 500 rupees which can be further reduced to 300 on mass production.
- **Price** : Selling at 800 rupees, with a 60% profit margin for sustainable growth.
